LIFETIME SERVICE POLICY

Beginning February 1, 1989, every new Smith & Wesson revolver and double or single action semiautomatic pistol will be covered by a Lifetime Service Policy. This new policy is in addition to our One-Year Limited Warranty. We at S&W are proud to offer you this further confirmation of our confidence in our handguns, and we invite you to write for a copy of our Warranty Statement.

An innovative spirit—and a foundation of experience. Those have been the key elements in Smith & Wesson's 138-year history. Innovations such as the invention of the rimfire cartridge and the development of the MAGNUM revolver. Experience with the semiautomatic pistol that stretches back nearly 100 years. And a revolver history that includes use by more than 10,000 law enforcement agencies nationwide and by police and military in over 70 countries around the world.

Of course, an important part of this story is Smith & Wesson's ongoing commitment to make use of the latest technology to implement the suggestions we constantly receive from our customers. So when we introduce a new model—and we've introduced more than 40 in the last eight years—it's because it meets or anticipates a real need.

The law enforcement community is a good example. When compact revolvers were needed for plainclothes and off-duty use, we developed not just one, but a selection of six. And when dramatic changes on the street dictated a move to the semiauto, our Third Generation pistols were evolved to fit those changes.

The same S&W pistols and revolvers that are preferred by police officers are also the first choice for home security. They offer the durability, safety, and reliability you can depend on, and the majority can easily go to the field for target or other types of recreational shooting.

All those qualities make a Smith & Wesson the first choice of hunters and shooting competitors, too. When we founded the Masters International Shooting Championship in 1986, it was because of our desire to help the major disciplines grow and gain recognition. In three short years, the Masters has become one of the most prestigious competitions in the world. It has also encouraged the involvement of women,

young people, and families in one of America's great traditional forms of recreation.

Handgun hunting, another of the country's great—if less well-known—traditions, has been expanding rapidly in recent years as more hunters seek to challenge their own skills. Last season, 49 states permitted some form of handgun hunting, up from 27 only a decade ago, and some 4 million people participated in this exciting sport. And Smith & Wesson has been part of that growth, with five new hunting revolvers in the last two years.

What it all comes down to is that Smith & Wesson, because of our size and long experience, has the capacity to offer a broad enough handgun line to fill all of these different requirements. But we never mistake "broad" for complete: we remain sensitive to your evolving needs—and committed to developing the new products to meet them.

A case in point is the development of our Third Generation of semiautomatics. This represented nothing less than the re-engineering of our entire double-action pistol line based on our experience and suggestions from the people who use our pistols.

Using space-age design techniques, all seven new models were tested on computer-linked equipment before ever being committed to metal, and prototypes were subjected to a battery of electronic trials. Most important, throughout their development, they were continuously subjected to "end-user" feedback from some 1,300 law enforcement agencies, further refined, and tested again.

What resulted are ergonomically advanced, user-tuned pistols, with an innovative yet functional design. A design that evolved not only from its predecessors, but even as it was being developed. In short, a classic example of Smith & Wesson's innovative spirit. A spirit firmly grounded in practical experience.

LIMITED EDITIONS '89

A fine handgun has an inherent value that somehow extends beyond price. And when that handgun is available in a small quantity, scarcity gives it an even more special value. In 1989, we're pleased to offer three such guns, very special limited edition revolvers, each with its own features—and its particular use. Each will be offered in a limited production run of 5,000.

The first is a descendant of the legendary Smith & Wesson Model 25-2, a .45 ACP revolver equally adept at IPSC-style competition or bowling pin shooting. As the S&W Model 625-2, it has a new life—and some modern refinements—for 1989. The refinements start with stainless steel construction for ease of maintenance and durability. The finish is frosted for low reflectivity and set off by black finger-grooved grips.

Rugged and powerful enough for strenuous competition, the 625-2's five-inch full-lug barrel affords superb balance and very light perceived recoil. Extremely smooth double action trigger pull, uncompromising accuracy, and highly efficient black sights complete this premiere revolver.

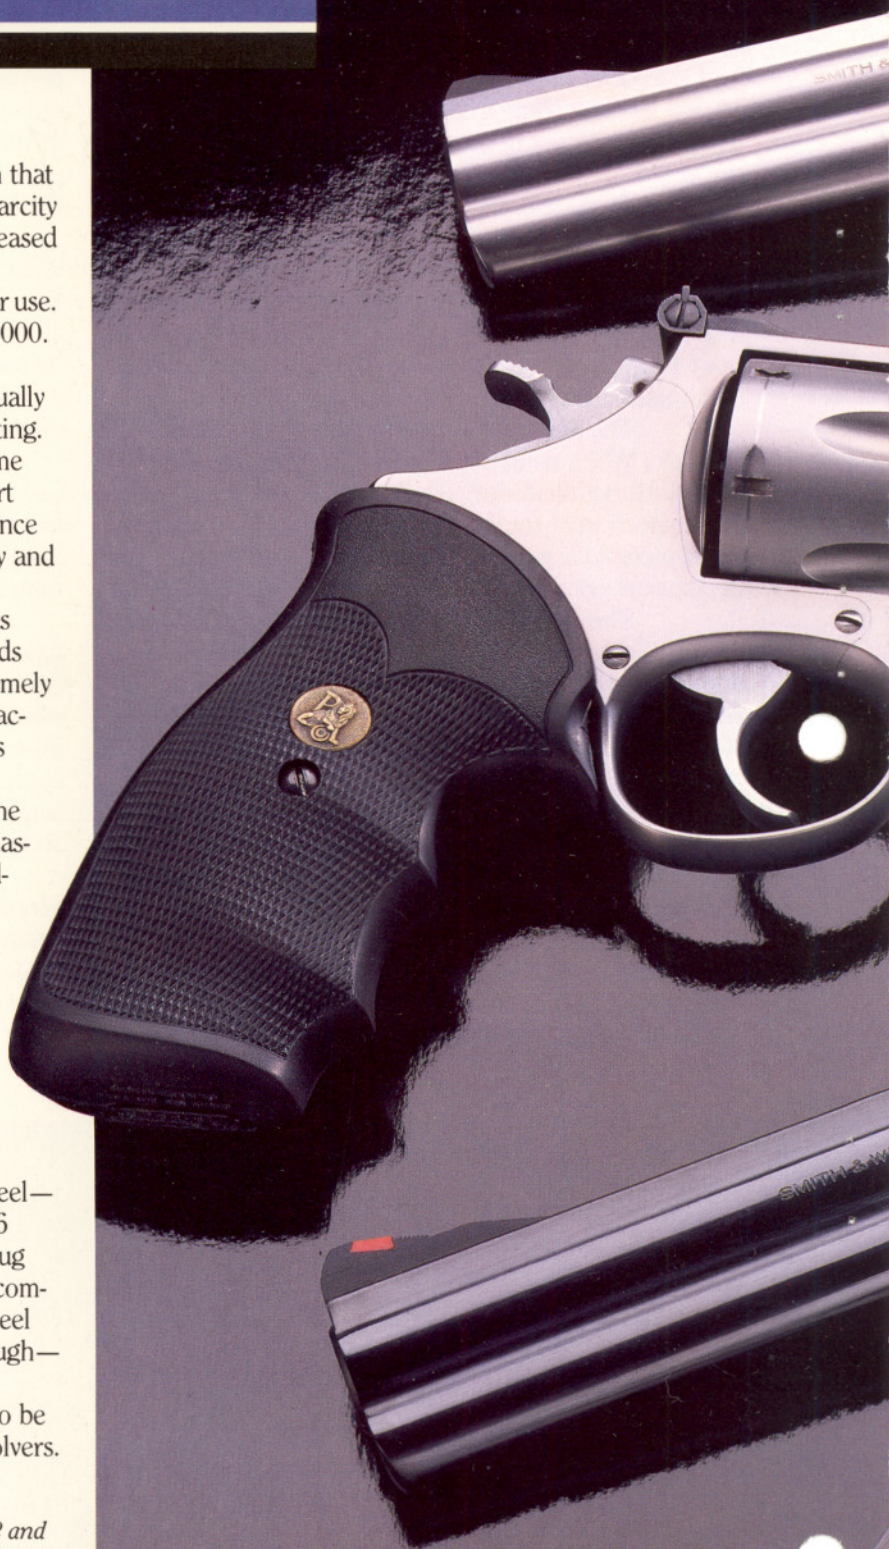

The second is the revolver that's been at the top of every hunter's wish list: the .357 MAGNUM Classic Hunter. It's every bit as rugged, reliable and handsome as its .44 MAGNUM predecessor. Finished in satin stainless with non-slip black Hogue grips, there's no question it was designed for the field.

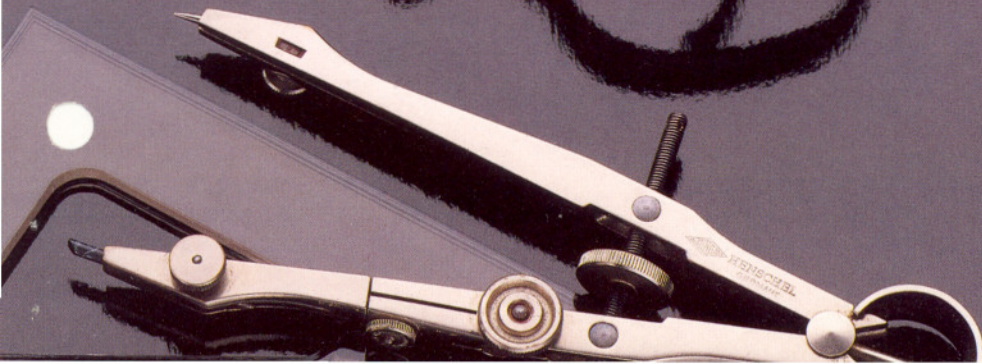

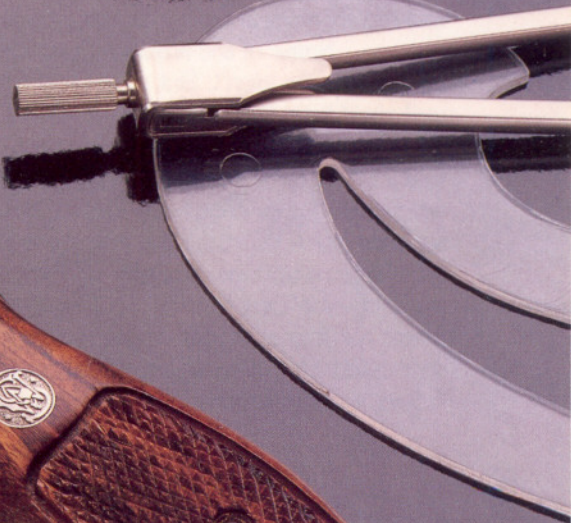

Hunters will really appreciate its superb accuracy, recoil-taming six-inch full-lug barrel, black pinned front/white outline adjustable rear sight system and sleek, unfluted six-shot cylinder. It's perfect for small game and varmints.

The third of the 1989 revolvers is an interesting variation for the shooter who likes stainless steel—but prefers the look of a blued finish. The Model 686 Midnight Black, a .357 MAGNUM with six-inch full-lug barrel is truly all-purpose, excellent for small game, competition, or home security. Sturdy, forged stainless steel construction and deep black finish make it lean and tough—as you expect a Smith revolver to be. And it looks it.

Collectible, certainly. But you don't need to be a collector to appreciate the '89 Limited Edition revolvers.

Shown, top to bottom: Classic Hunter (.357), Model 625-2 and Model 686 Midnight Black. For additional information, please refer to page 25 of the Product Selection Guide.

SEMI AUTOMATICS

Developed and refined over a two-year period, our Third Generation pistols represent nothing less than the complete re-engineering of the entire S&W DA semiauto line. It was a massive undertaking that involved more than 23 major innovations, and affected 70% of the parts that make up our semiautos.

Much of this innovation was accomplished with the help of 1,300 law enforcement agencies across the country, who provided us with "end-user" feedback throughout. What ultimately evolved was a group of seven semiautos that were designed to law enforcement specifications. So it's no surprise that, after only two short months of availability, more than 250* agencies have already purchased these pistols—including the State Highway Patrols of Tennessee, Georgia, and New Mexico. The same exacting standards have been applied to the Third Generation pistols that are on your dealer's shelves, making them ideal for home and personal security use.

Some of the advancements are immediately obvious. Some aren't. But all set the Third Generation well apart from their predecessors—and their competitors.

The moment you pick one up, you'll feel some major changes. It starts with the ergonomically advanced wraparound grip, contoured for comfort and textured for superior hold. Whether you prefer the standard curved backstrap or optional straight, that grip really fits. You probably won't see the relief cut where the trigger guard meets the frame, but you'll definitely feel that, too. It lets your hand assume the right position automatically for excellent pointability and straight-through trigger pull.

When you point a Third Generation pistol, you'll see a quicker, clearer sight picture with our new three-dot sight system. The dovetailed front sight is replaceable, and on five of the seven models you have the option of selecting an adjustable rear sight.

You'll also notice that the finish on both blue and stainless models has been bead-blasted to cut down on glare and reflectivity. Incidentally, Smith & Wesson is the only manufacturer to offer at least one version of every model in easy-care stainless.

Ready to take the next step? You'll experience the smoothest double action trigger pull available. You'll also feel how much more comfortable the radiused trigger is. And when you fire a Third Generation semiauto, you'll discover what a fixed barrel bushing can do for accuracy.

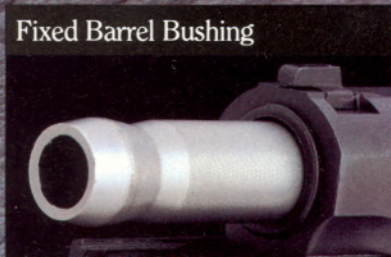

In addition to accuracy, we've built some shooting convenience into these pistols as well. For one thing, you'll notice the trigger guard's been extended to accommodate a gloved hand. For another, all magazines are numbered for quick reference, and fitted with combat-style butt plates to eliminate snagging and cushion the fall when you drop one during a quick reload. The beveled magazine wells on all models help make reloading quicker and easier, too.

And when you're not ready to shoot, you'll appreciate S&W's unique three-safety system, including the ambidextrous external safety lever with red dot indicator, firing pin block, and magazine disconnect. These safety options make our semiauto the safest available.

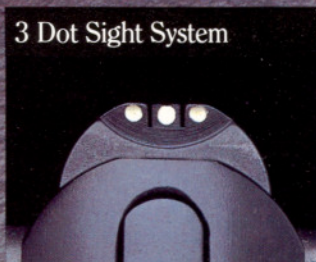

Fact is, the Third Generation not only look different, they are different—completely re-engineered inside and out. When you pick one up, you'll be getting a firm grip on the future. And you'll experience what a well-designed semiauto is all about.

3900/5900 SERIES SEMIAUTOMATICS

Direct descendants of the first American-made double-action 9mm semiautomatics, the 3900 and 5900 Series combine proven durability and reliability with superb ergonomics.

When you pick up one of these full-size semiautos, the first thing you'll notice is how comfortably it fits your hand—even if your hand's not "average". That's because both are fitted with contoured wraparound grips and your choice of standard curved or optional straight backstrap. And whichever capacity suits your particular needs, both the eight-shot 3900s and 14-shot 5900s easily digest a wide variety of ammunition.

When it comes to shooting, these 9mms typify the superb accuracy and pointability built into the Third Generation pistols. The three-dot sight system helps you get a quick, clear sight picture—even in low light—and you can select fixed or adjustable rear sights. And double action trigger pull is, very simply, the smoothest available today.

Both series are available in your choice of easy-care stainless steel (3906/5906) or lighter-weight alloy (3904/5904). Stainless steel barrels, main spring plungers, manual safeties and slide stops are now standard for greater durability in all models. And both stainless and blue versions feature a low-glare bead-blasted finish.

The full-size S&W 9mms. For use on duty, or at home. They're the obvious choice.

Shown, clockwise from left: Model 3906, Model 5904 and 5906. For additional information, please refer to page 25 of the Product Selection Guide.

6900 SERIES SEMIAUTOMATICS

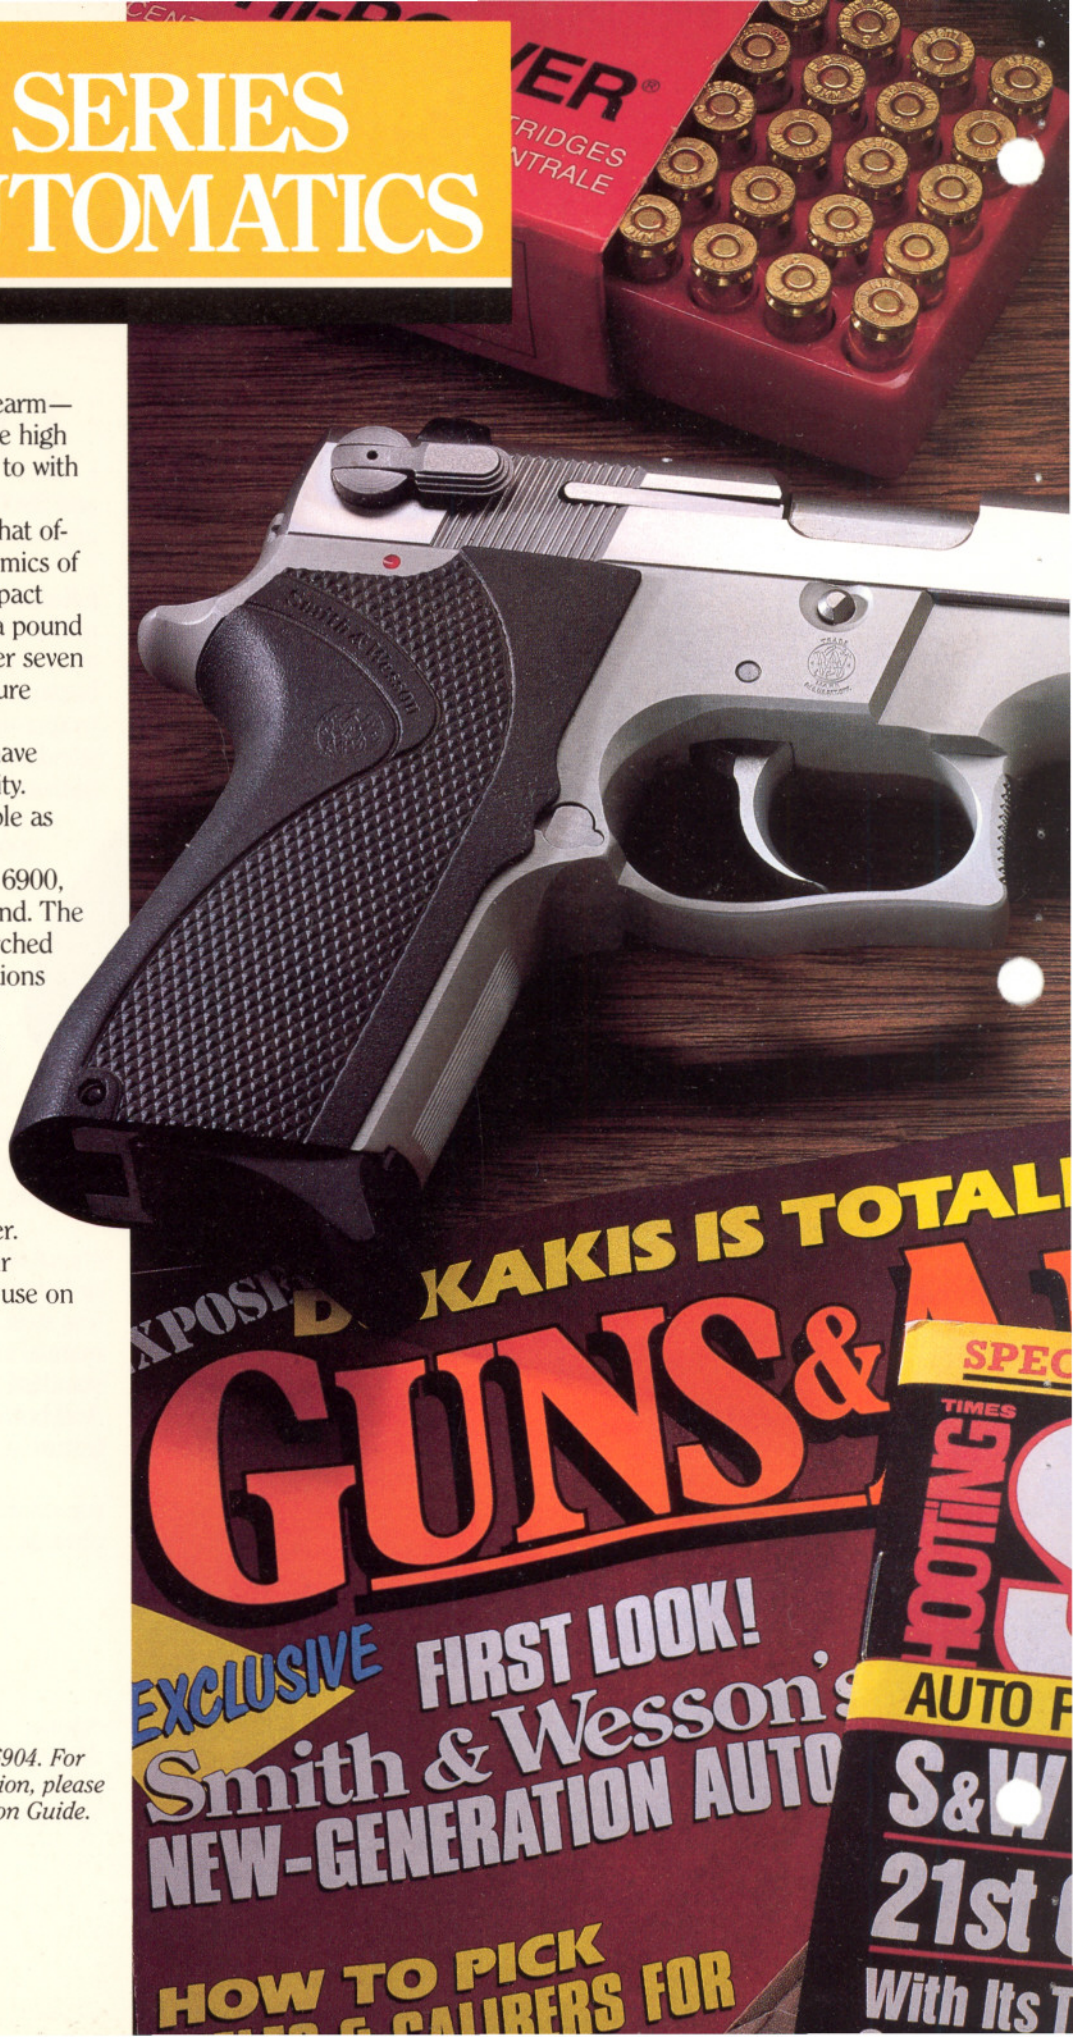

Looking for a compact firearm—but don't want to sacrifice high capacity? You don't have to with the Smith & Wesson 6900 series.

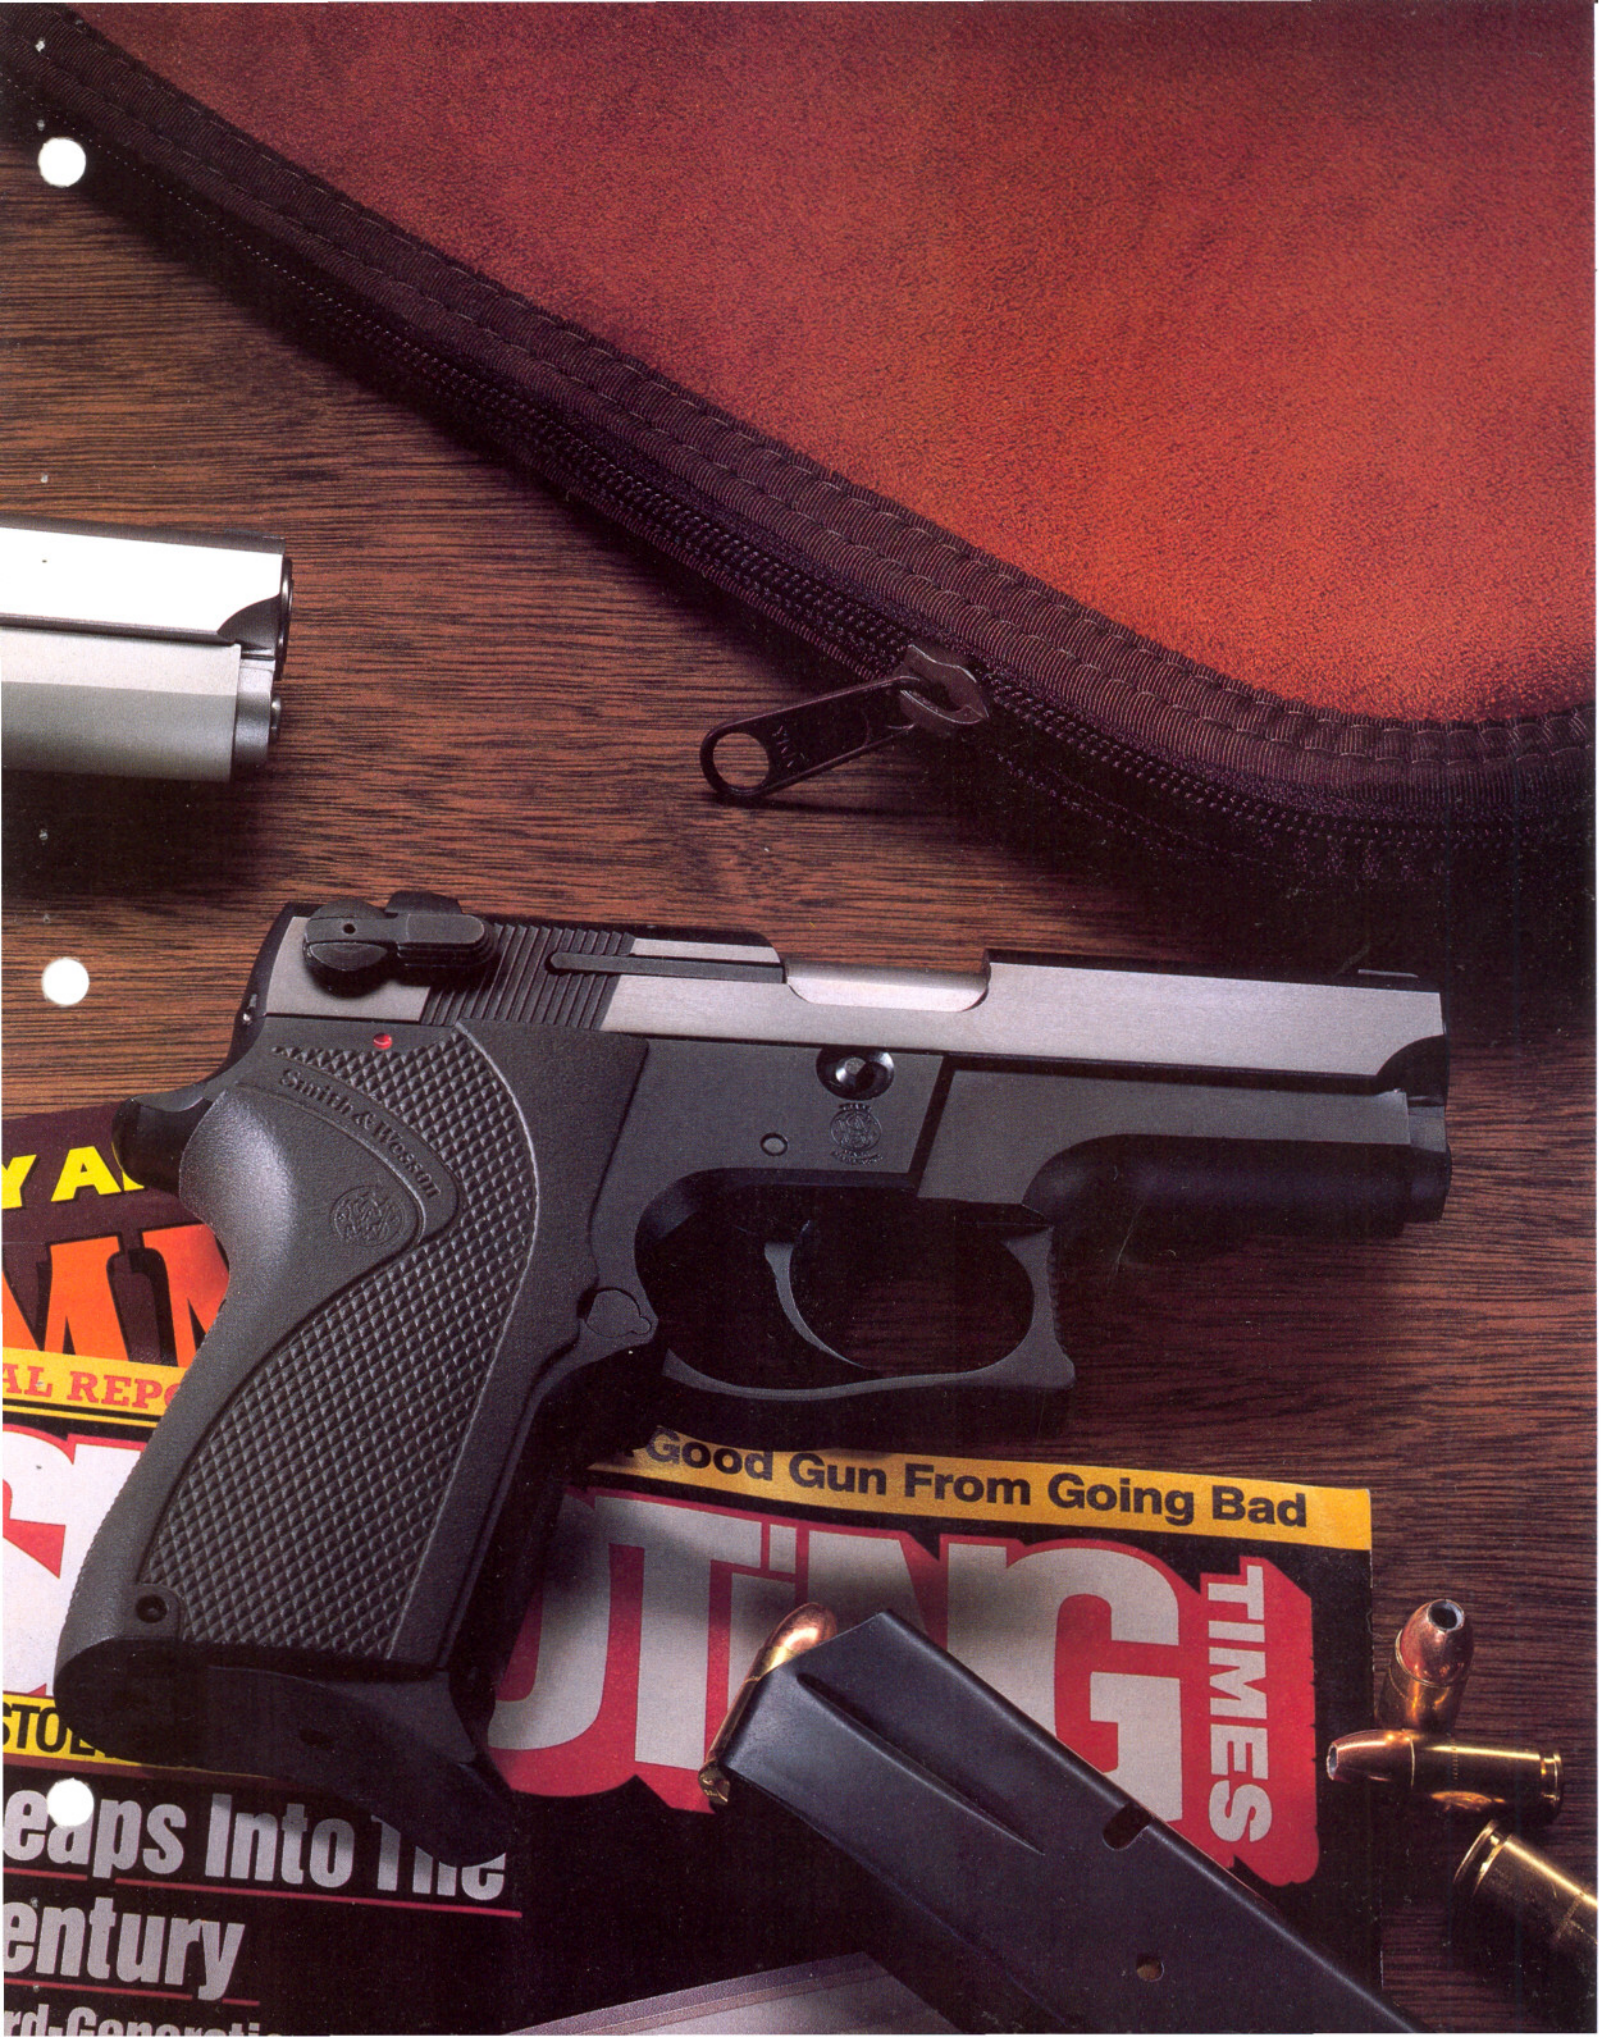

Here's a semiautomatic that offers all the refinements and ergonomics of the 3900 and 5900 series in a compact package. Weighing in at less than a pound and a half and measuring well under seven inches overall, the 6900 series feature a tough alloy frame and a stainless or carbon steel slide. Both 6900s have fixed rear sights and 12-shot capacity. A twenty-round magazine is available as an option.

And when you pick up a 6900, you'll feel how well it fits in your hand. The contoured wraparound grip with arched or optional straight backstrap positions the gun comfortably and securely. The extension at the bottom of the magazine butt plate allows you to easily position your bottom finger.

Both the 6904-blue and the 6906-stainless come in a bead-blasted finish and feature smooth, rounded edges and bobbed hammer. These features, combined with their compact size, make them ideal for use on duty or at home.

Shown, left to right: Model 6906 and 6904. For specifications and additional information, please refer to page 25 of the Product Selection Guide.

Good Gun From Going Bad

STAMP
TIMES

4500 SERIES SEMIAUTOMATICS

Until now, you had only one choice if you were looking for a high-capacity, stainless steel, double action .45 semiautomatic. Now you have two.

The first is the full-size Model 4506. Superbly accurate with virtually any ammunition, so beautifully balanced you'll forget it's a large-bore pistol, the 4506 offers all the innovations that make the Third Generation guns such a pleasure to shoot.

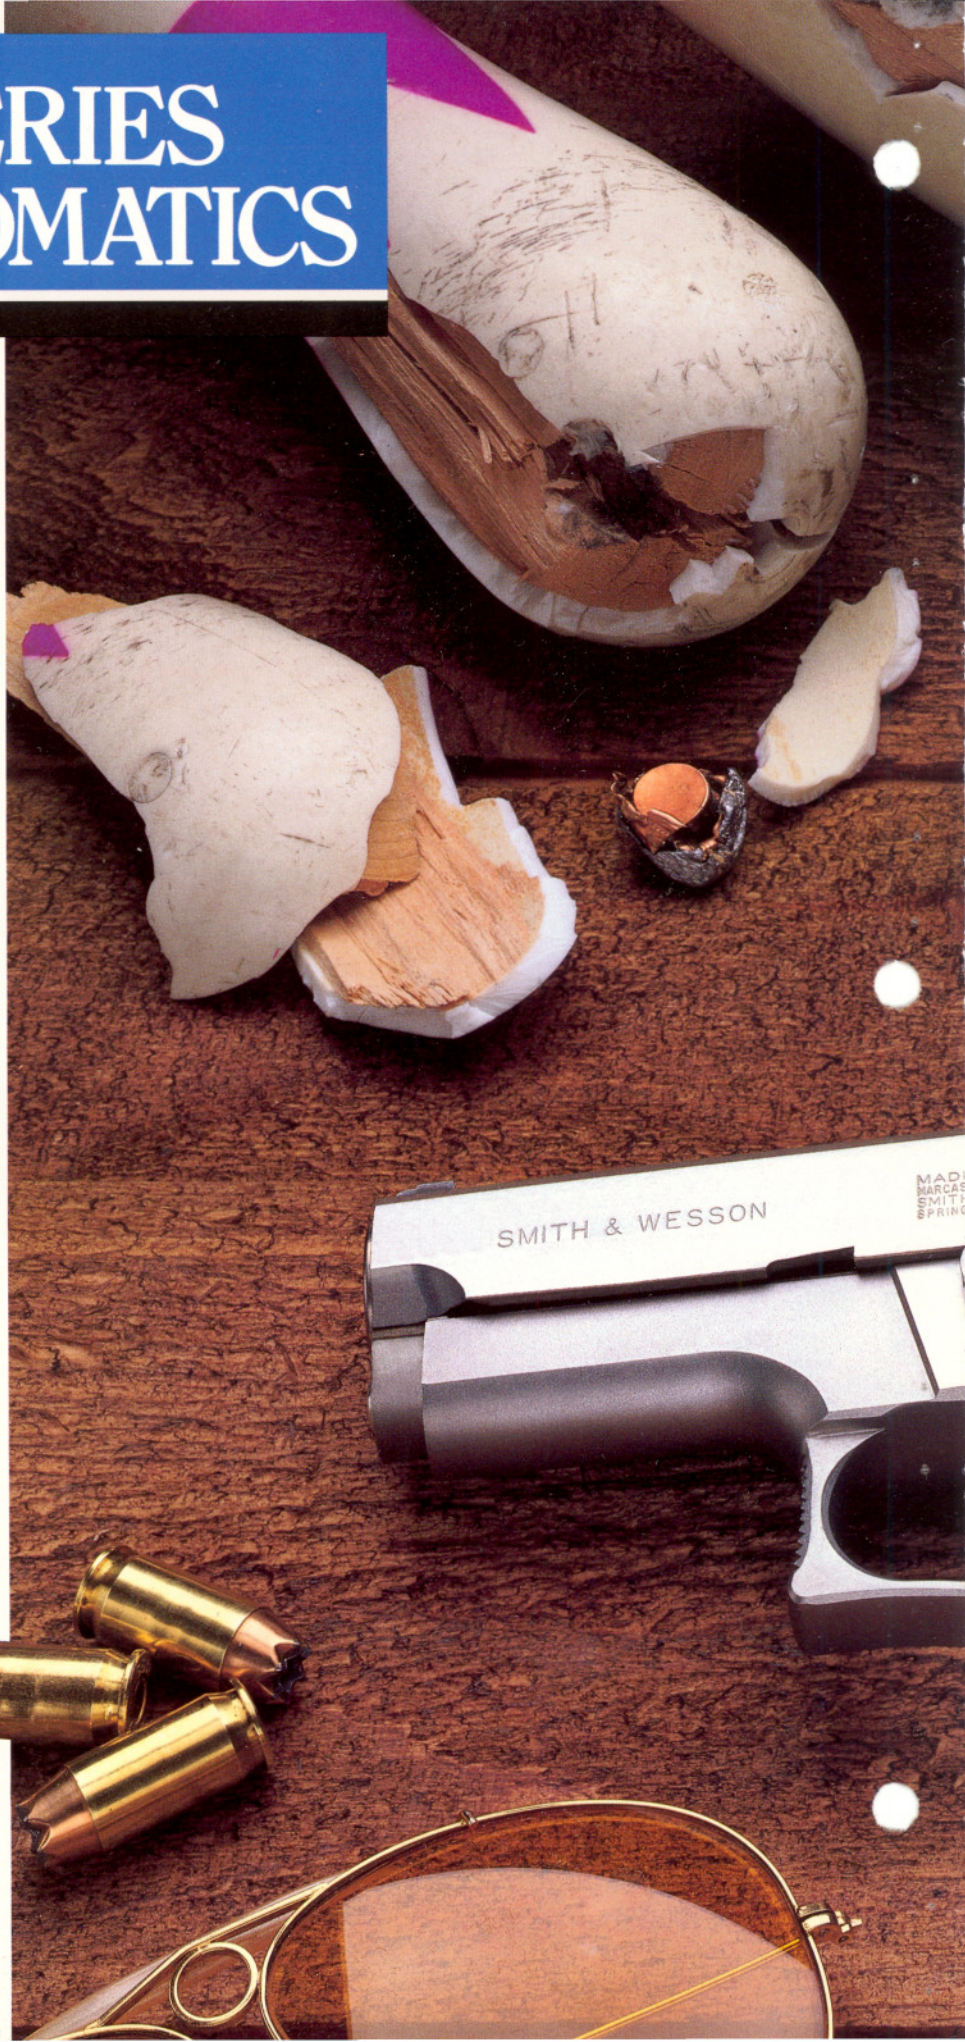

It starts with ergonomics: textured, contoured wraparound grip, arched or straight backstrap, for comfort, control and fit. Add three-dot sights—fixed or adjustable rear sight at your option—and the smoothest DA trigger pull available in a production .45. The sum is a very versatile eight-shot pistol, equally adept at police work, sport shooting or home security. And it's durable enough for all three.

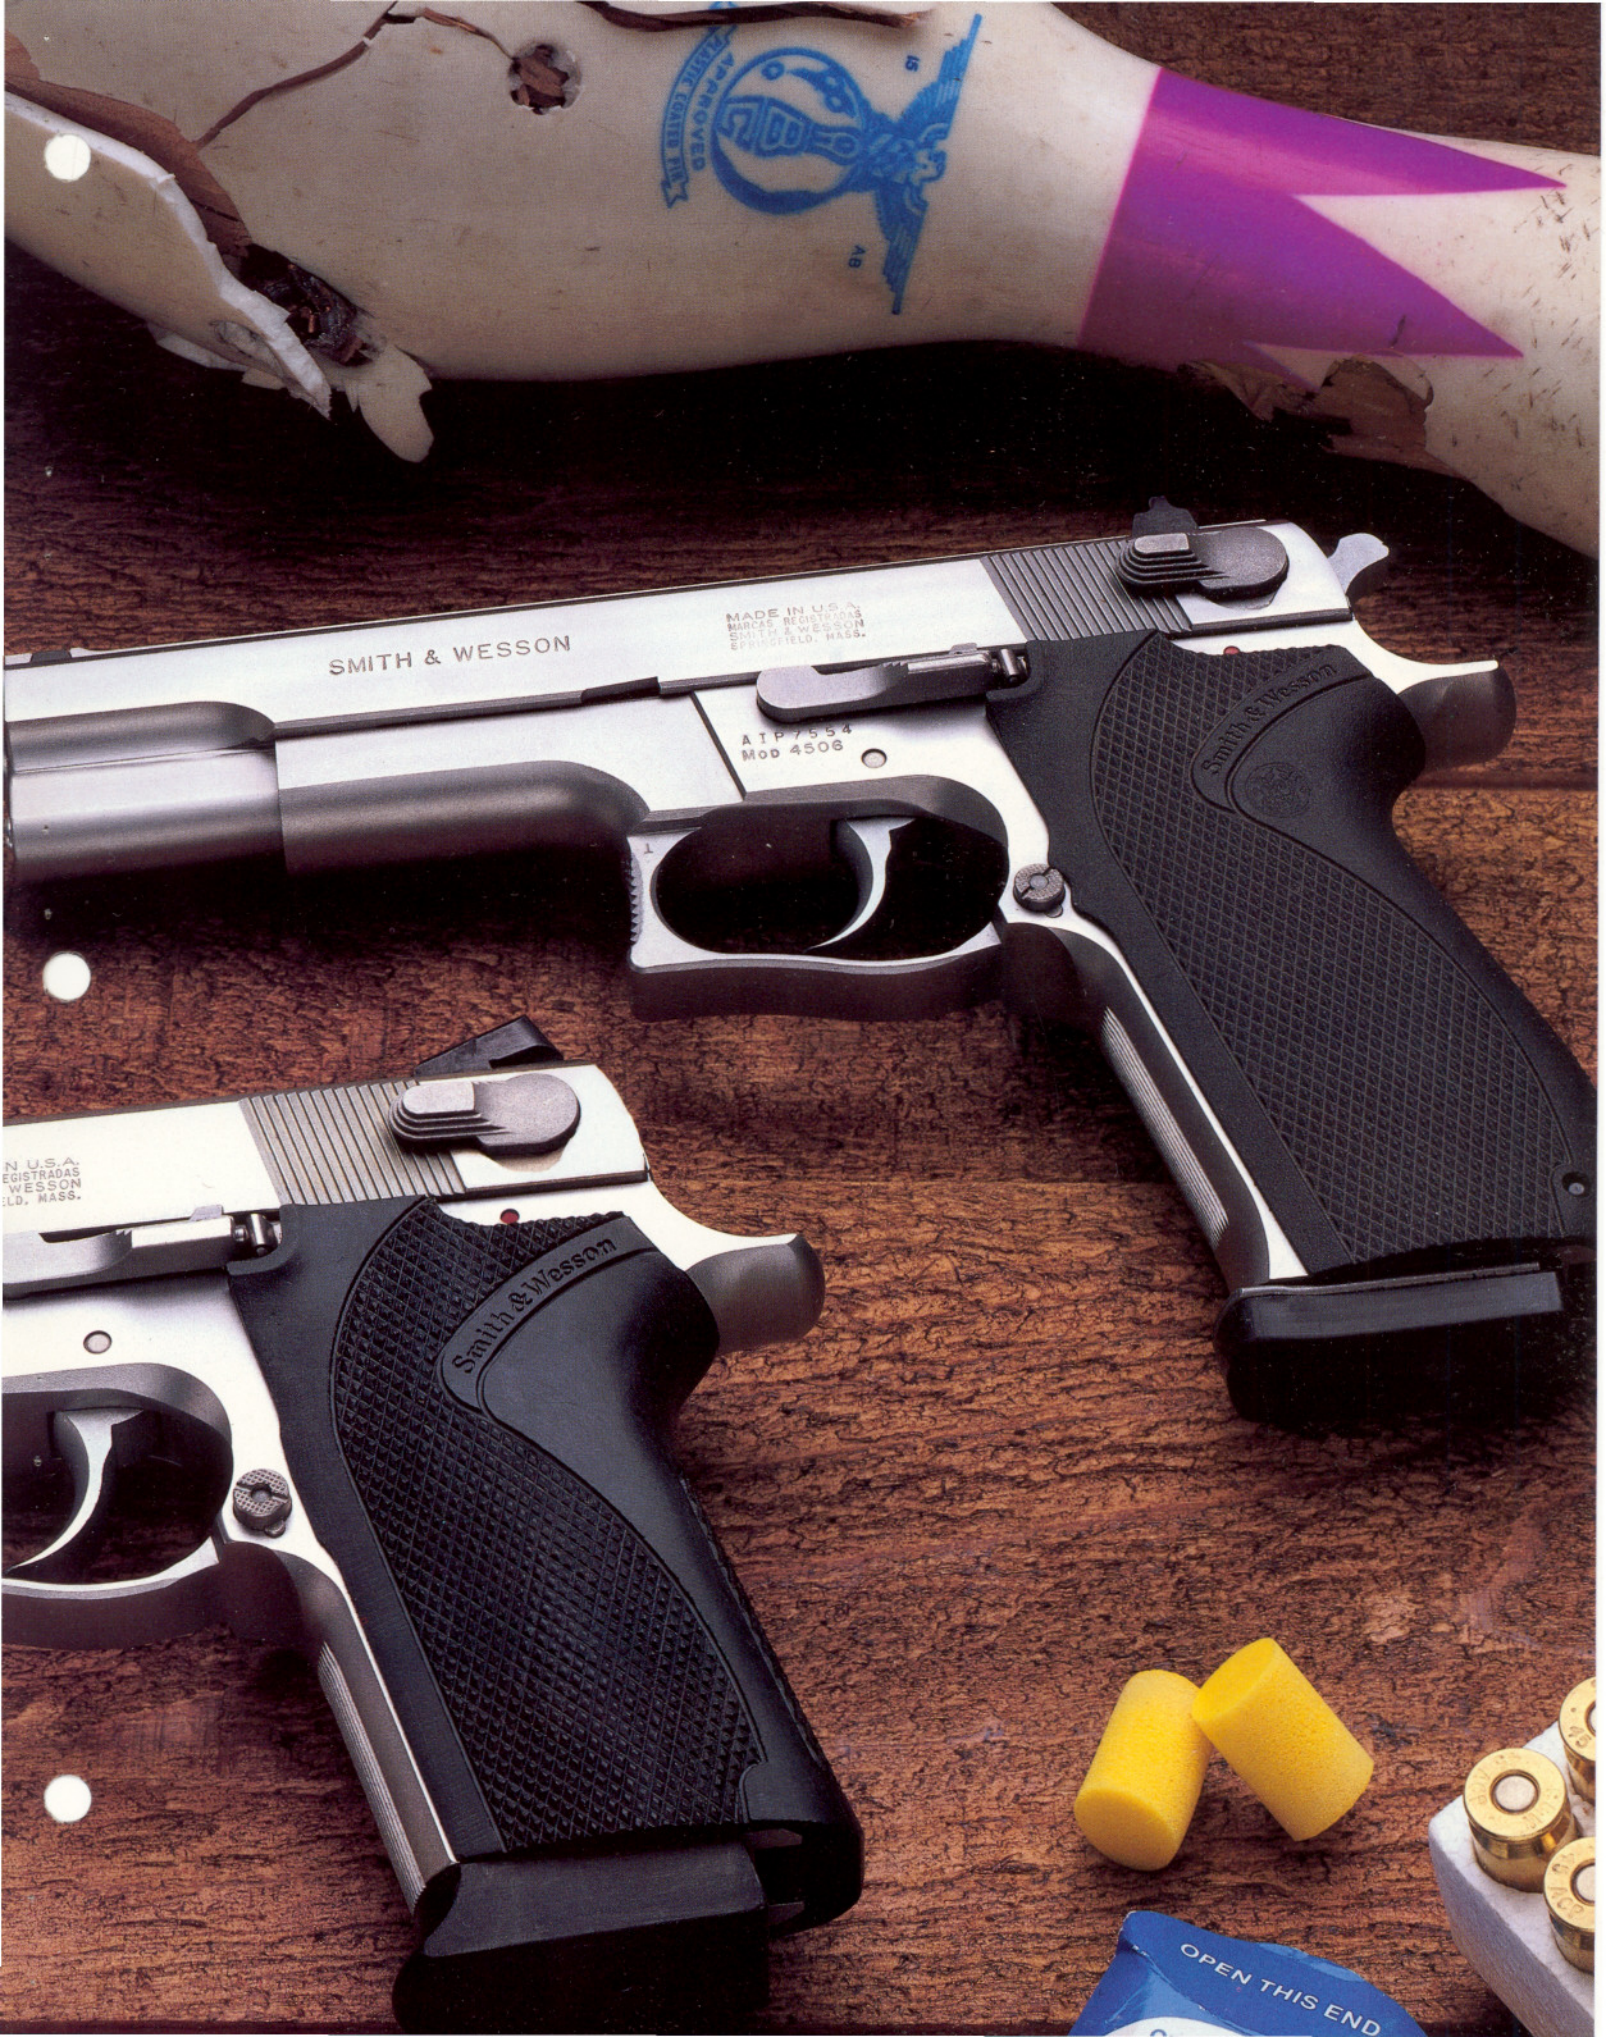

You'll find the same superior design and construction in the Model 4516, the newest member of the Third Generation—and S&W's first compact .45 is an inch shorter and four ounces lighter. In addition to concealable size, its rounded trigger guard and bobbed hammer are very snag-resistant.

Despite its trim proportions, it boasts a seven-shot magazine, three-dot sights, and contoured wraparound grip. And you'll find the 4516 remarkably accurate and smooth-functioning.

So take your pick. Full-size or compact. One of these tough, reliable—and handsome—DA pistols is the .45 you're looking for.

Shown, top to bottom: Model 4506 and Model 4516 Compact. For additional information, refer to page 25 of the Product Selection Guide.

TARGET PISTOLS

Challenging, relaxing, and fun. That's target shooting, regularly enjoyed by some 25 million Americans. And there's a Smith & Wesson single action target pistol to fit every level of expertise.

Beginner or expert, you'll enjoy the .22 caliber Model 422. Light and simple enough for the novice, yet with accuracy that rivals far more expensive .22s, the 422 offers the quality and sturdiness you expect from S&W—and an unexpectedly affordable price.

New for 1989 is the Model 622, which gives you the option of easy-care stainless steel. Whichever you prefer, you'll find the 422/622 more than just handsome—it's a performer.

At the professional level, the Model 41 sets the competitive standard. Used straight from the box by top bullseye shooters—including more than half the competitors at the '88 Masters—the 41 is consistently accurate without additional fine-tuning. It's also remarkably untemperamental and durable—Model 41s built in 1957 still routinely win major shoots.

The Model 41 is uncompromising. The only superior target-grade .22 in production in the U.S., its price is still far more reasonable than costly imports with similar features.

The Model 52 is another S&W target pistol constructed without compromise. This five-shot SA .38 Special offers you extreme accuracy, beautiful balance, and clean, crisp trigger pull right from the factory.

So whatever your game, from tin cans to biathlon targets, you'll find a Smith & Wesson target pistol worth setting your sights on.

Shown, top to bottom: Model 41, Model 622 and Model 422. For more information, please refer to page 26 of the Product Selection Guide.

REVOLVERS

In the building of practical, functional, user-tuned revolvers, Smith & Wesson has one attribute few—if any—of our competitors can lay claim to: experience. For us, a revolver isn't experimental. It's the highest form of mature technology, evolved over nearly a century and a half of field-testing and feedback.

Naturally, some things have changed a little over time. We're now using the latest in computer-linked technology to maintain our traditionally high standards. We've added models, calibers, features, and new materials based on what we've learned about our end-users' needs.

Of course, some things haven't changed. The lean, tough construction that's the hallmark of S&W revolvers, for example. We've always forged our frames and parts for maximum strength without unnecessary bulk, because we know that—in handguns, at least—thickness is at best a dubious virtue. Our forging process allows us to give our revolvers a superior finish, too, because we don't have to overcome the problem of porosity that's associated with investment casting.

Our double action trigger pull hasn't changed, either. It's traditionally—and currently—the smoothest available, right out of the box.

You also have a lot to choose from—right out of the box. The Smith & Wesson revolver line is the broadest in the world with 26 models—and 100 model variations. So you can purchase a revolver that's virtually customized without a trip to the gunsmith.

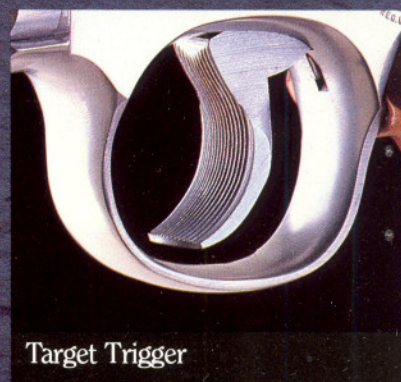

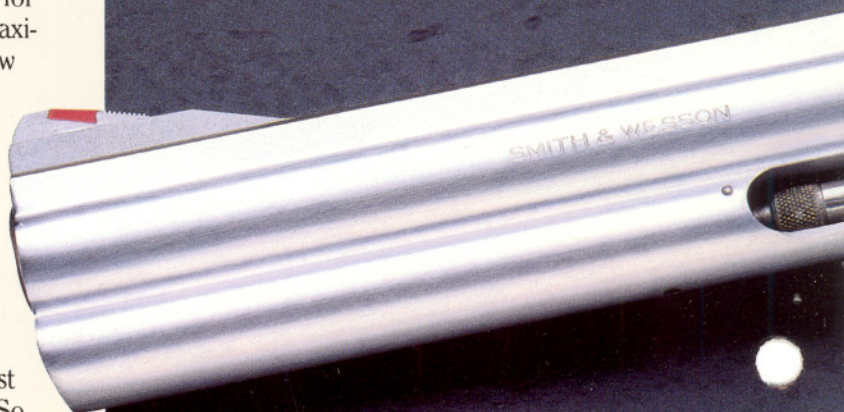

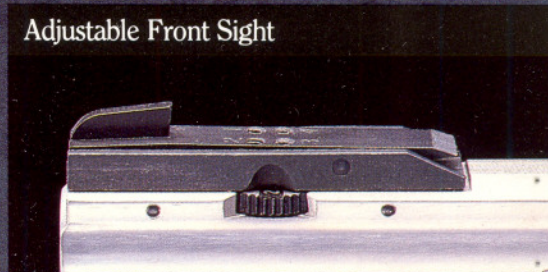

Take a quick look at some of the features and numerous options that make S&Ws such a remarkable value. There are, for instance, four different frame sizes to fit any hand and any need. And you can have your choice of barrel length. Depending on the frame size you like, you can select from seven, ranging from two inches up to 10⁵/₈. And when it comes to hammers and triggers, you'll need to choose target or combat-style.

Now, check our sight systems for the combination that matches your requirements. Altogether, there are five front sights, including red ramp, black pinned, and four-position click adjustable, and four rear sights, from fixed square to fully adjustable micrometer click.

Finally, exercise your stock options. Again, the selection depends on frame size, but you always have sufficient alternatives. These include round or square butt, smooth or checkered target stocks, smooth combat grips, checkered service stocks, in walnut or Goncalo Alves. You can get a complete picture of which options and features are available on the model that interests you most by checking the Product Selection Guide that starts on page 24 of the catalog.

The result will be a Smith & Wesson tailored to your specific needs. Lean and tough, built with the highest-tech equipment to field-tested specifications. It's really no wonder that, for police work, for sport from hunting to bullseye, and for home and personal security, S&W revolvers are the world's first choice.

SMALL FRAME REVOLVERS

In a personal carry gun, you're looking for some special qualities. Light weight. Compact size. Durability. Accuracy. All in a caliber that's appropriate for you. That's why you're looking at the Smith & Wesson small-frame revolvers, the first choice of thousands of police departments and individual officers for off-duty and backup carry.

It starts with their light weight. Even in .38 Special—the preferred law enforcement caliber—they weigh in at between 14 and 21½ ounces. And their extremely compact size is complemented by their slim silhouettes and smooth, non-snagging contours.

They may be light, but they're also strong, because they're forged for toughness without unnecessary bulk. And, like all Smiths, they're reliable, easy to maintain, and functional.

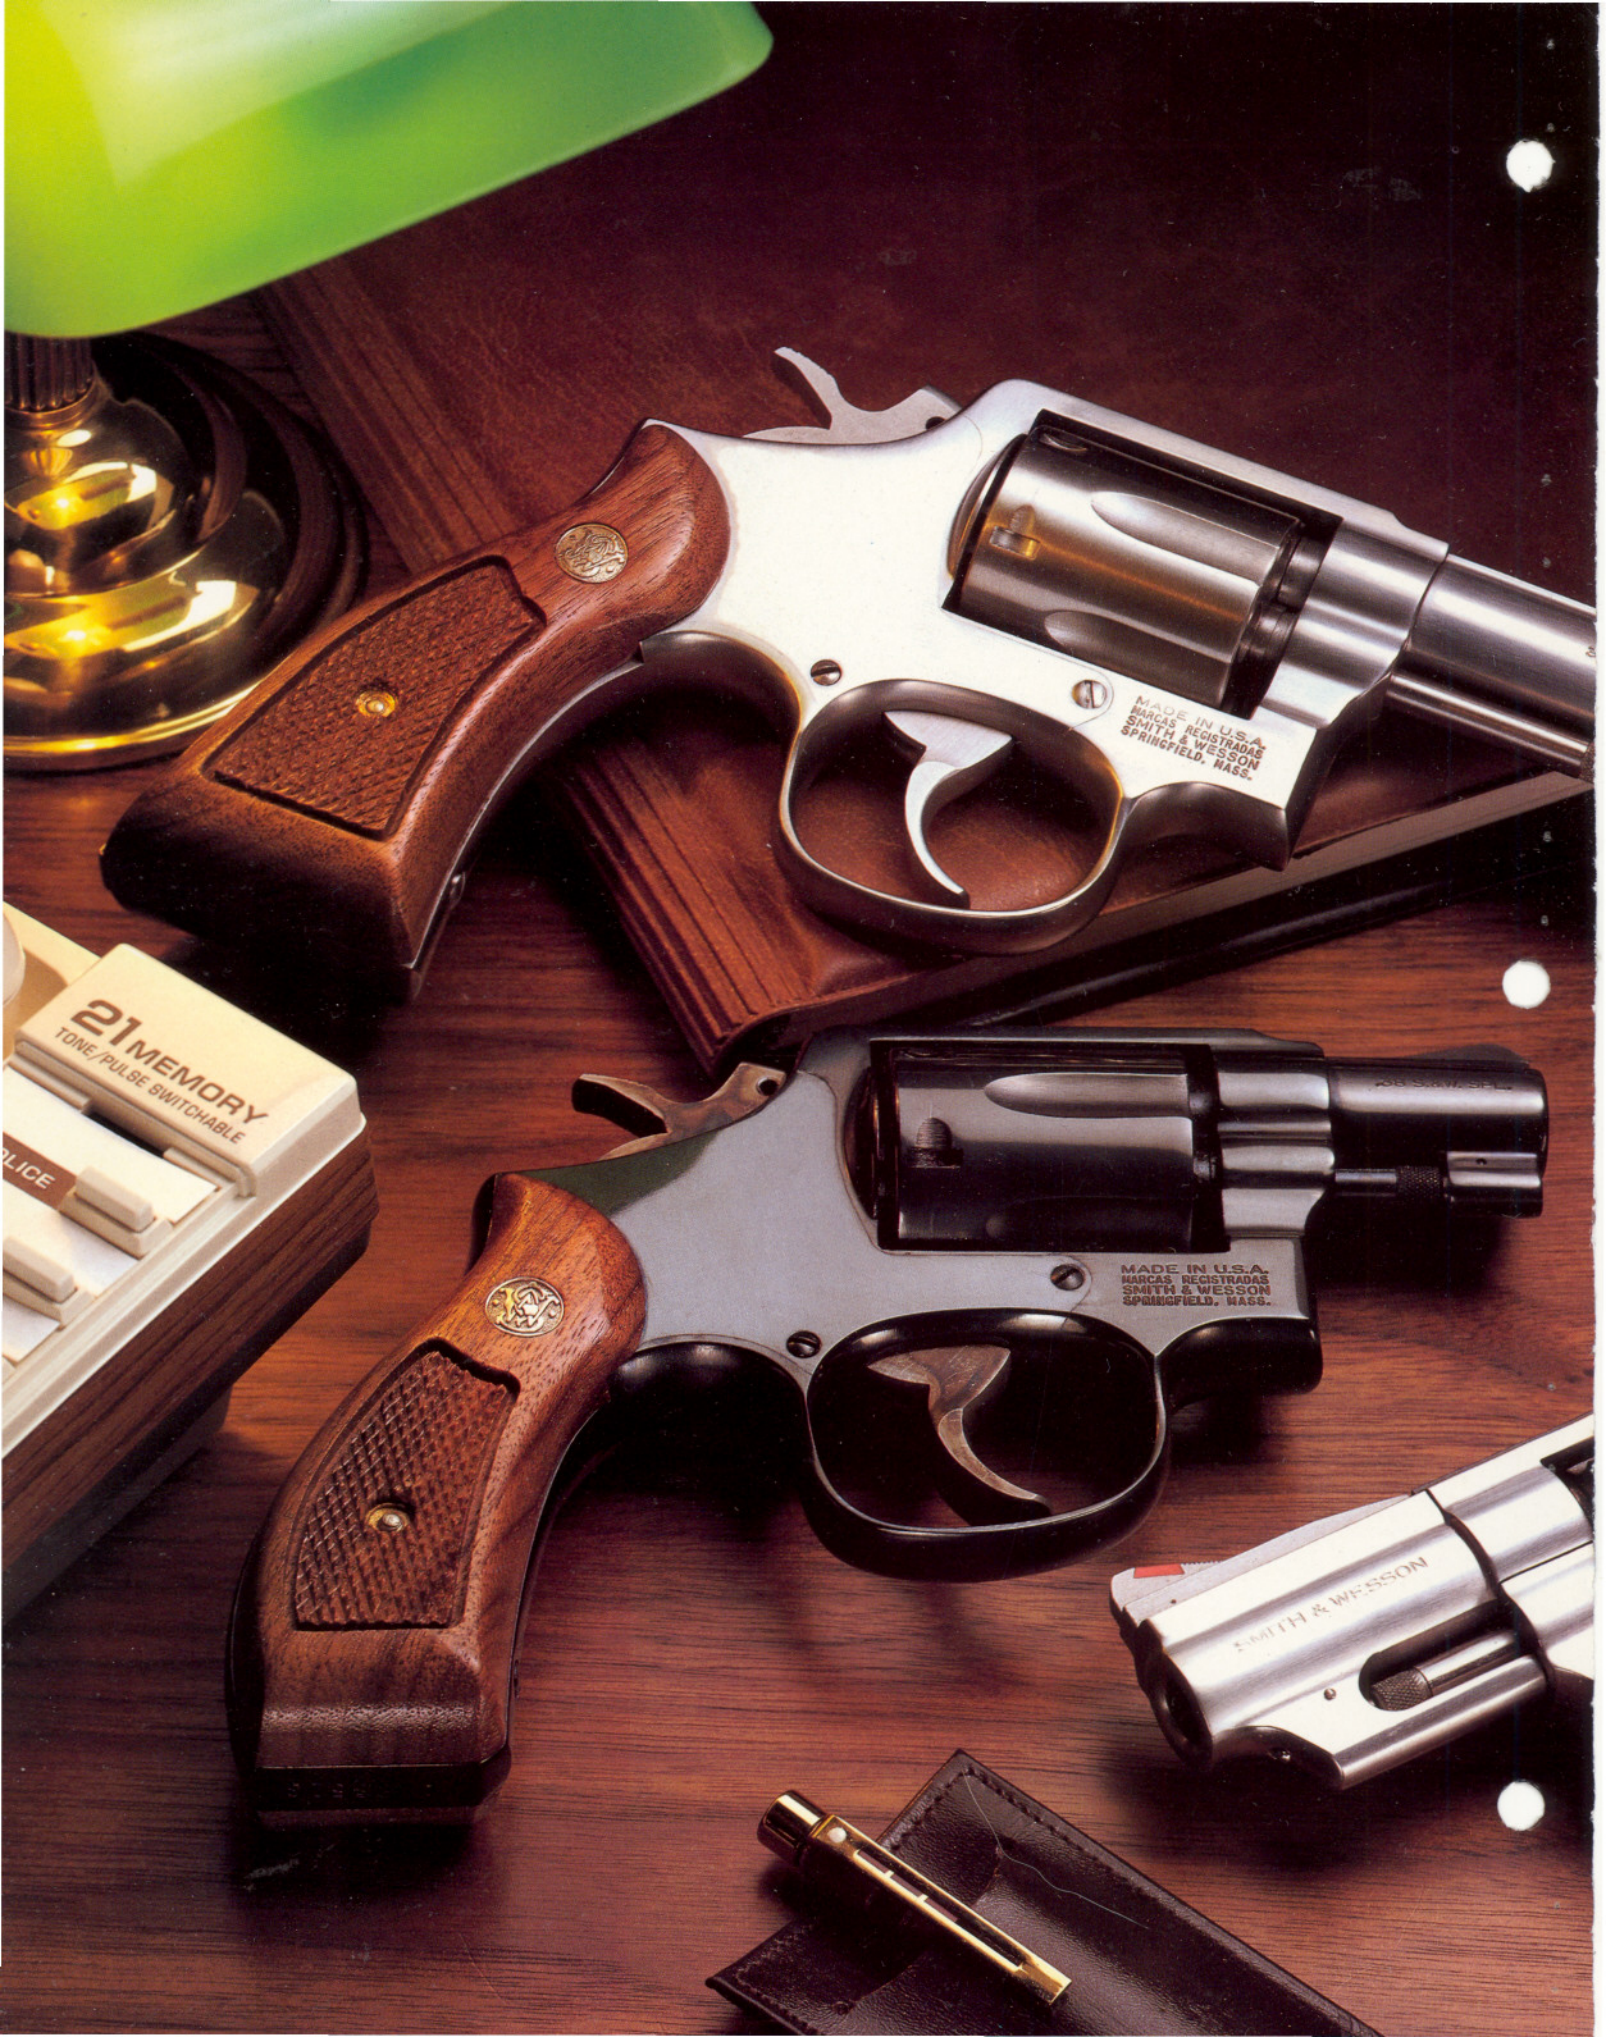

These revolvers also come in a wide variety of sizes and finishes. In .38 Special, for instance, you can choose from three easy-care stainless steel and five blue models, with either two- or three-inch barrel lengths. Grips are ergonomically correct and comfortable for practice. Several models are available with shrouded snag-resistant hammers, and two offer you the option of lightweight alloy frames.

These are the compact revolvers that don't ask you to compromise the caliber and quality you need for the small size and light weight you want. It's true that the S&W compacts cost more than some of their competitors. But once you've decided to own a personal handgun, shouldn't reliability and safety be your first considerations in choosing one?

Shown, clockwise from left: Model 60, Model 649 and Model 36. Other S&W small-frame revolvers are available in .22 and .32 caliber. For more information, refer to page 27 of Product Selection Guide.

SMITH & WESSON

MEDIUM FRAME REVOLVERS

Security. Not long ago it meant a good job, a home, and locking the door at night. But lately it's started to mean new locks, floodlights, a dog...maybe even a handgun.

When you've come to the conclusion that a reliable, no-nonsense handgun should be part of your security arrangements, there are still a few things to consider. Is it reasonably light but powerful and sturdy? Easy to handle and maintain? A medium-frame Smith & Wesson revolver is.

These revolvers, in .38 caliber or .38/.357 MAGNUM, have been the long-standing preference of a wide variety of law enforcement agencies for all those reasons—and a few more. One is the availability of easy to maintain stainless steel in four of the seven models. Another is their excellent balance, pointability, and built-in accuracy—which is why these Smiths dominate PPC shooting competition.

Add to this their field-proven reliability and the availability of 34 model variations—enough to fit any hand or special need. The result is a revolver ideal for on- or off-duty carry, competition, backup for your hunting long gun, or protection at home.

And a revolver that you can feel very secure about.

Shown, clockwise from top: Model 64, Model 66 and Model 10. For more information, please see pages 28 and 29 in the Product Selection Guide.

.357 MEDIUM FRAME REVOLVERS

Ask a cross-section of sportsmen and law enforcement professionals which handgun they'd own if they could own only one, and their answers will be remarkably similar: a Smith & Wesson medium-frame .357 MAGNUM revolver. The reason is obvious: these revolvers are the strongest and most versatile in the world.

Developed and constructed specifically to handle a steady diet of MAGNUM loads, yet they're lean and easy to handle. That's because their strength comes from superior engineering and the forging process we use to manufacture them—not from the added bulk of a big, beefy frame. The toughness is confirmed by endurance tests at numerous federal agencies, where they've easily exceeded 10,000 MAGNUM rounds. You'll feel the leanness when you carry one all day on the street or in the field.

You'll also feel the smoothest double action trigger pull available. Add the enhanced accuracy of the recoil-taming full-lug barrel, and you have performance fit for competition or small game right out of the box.

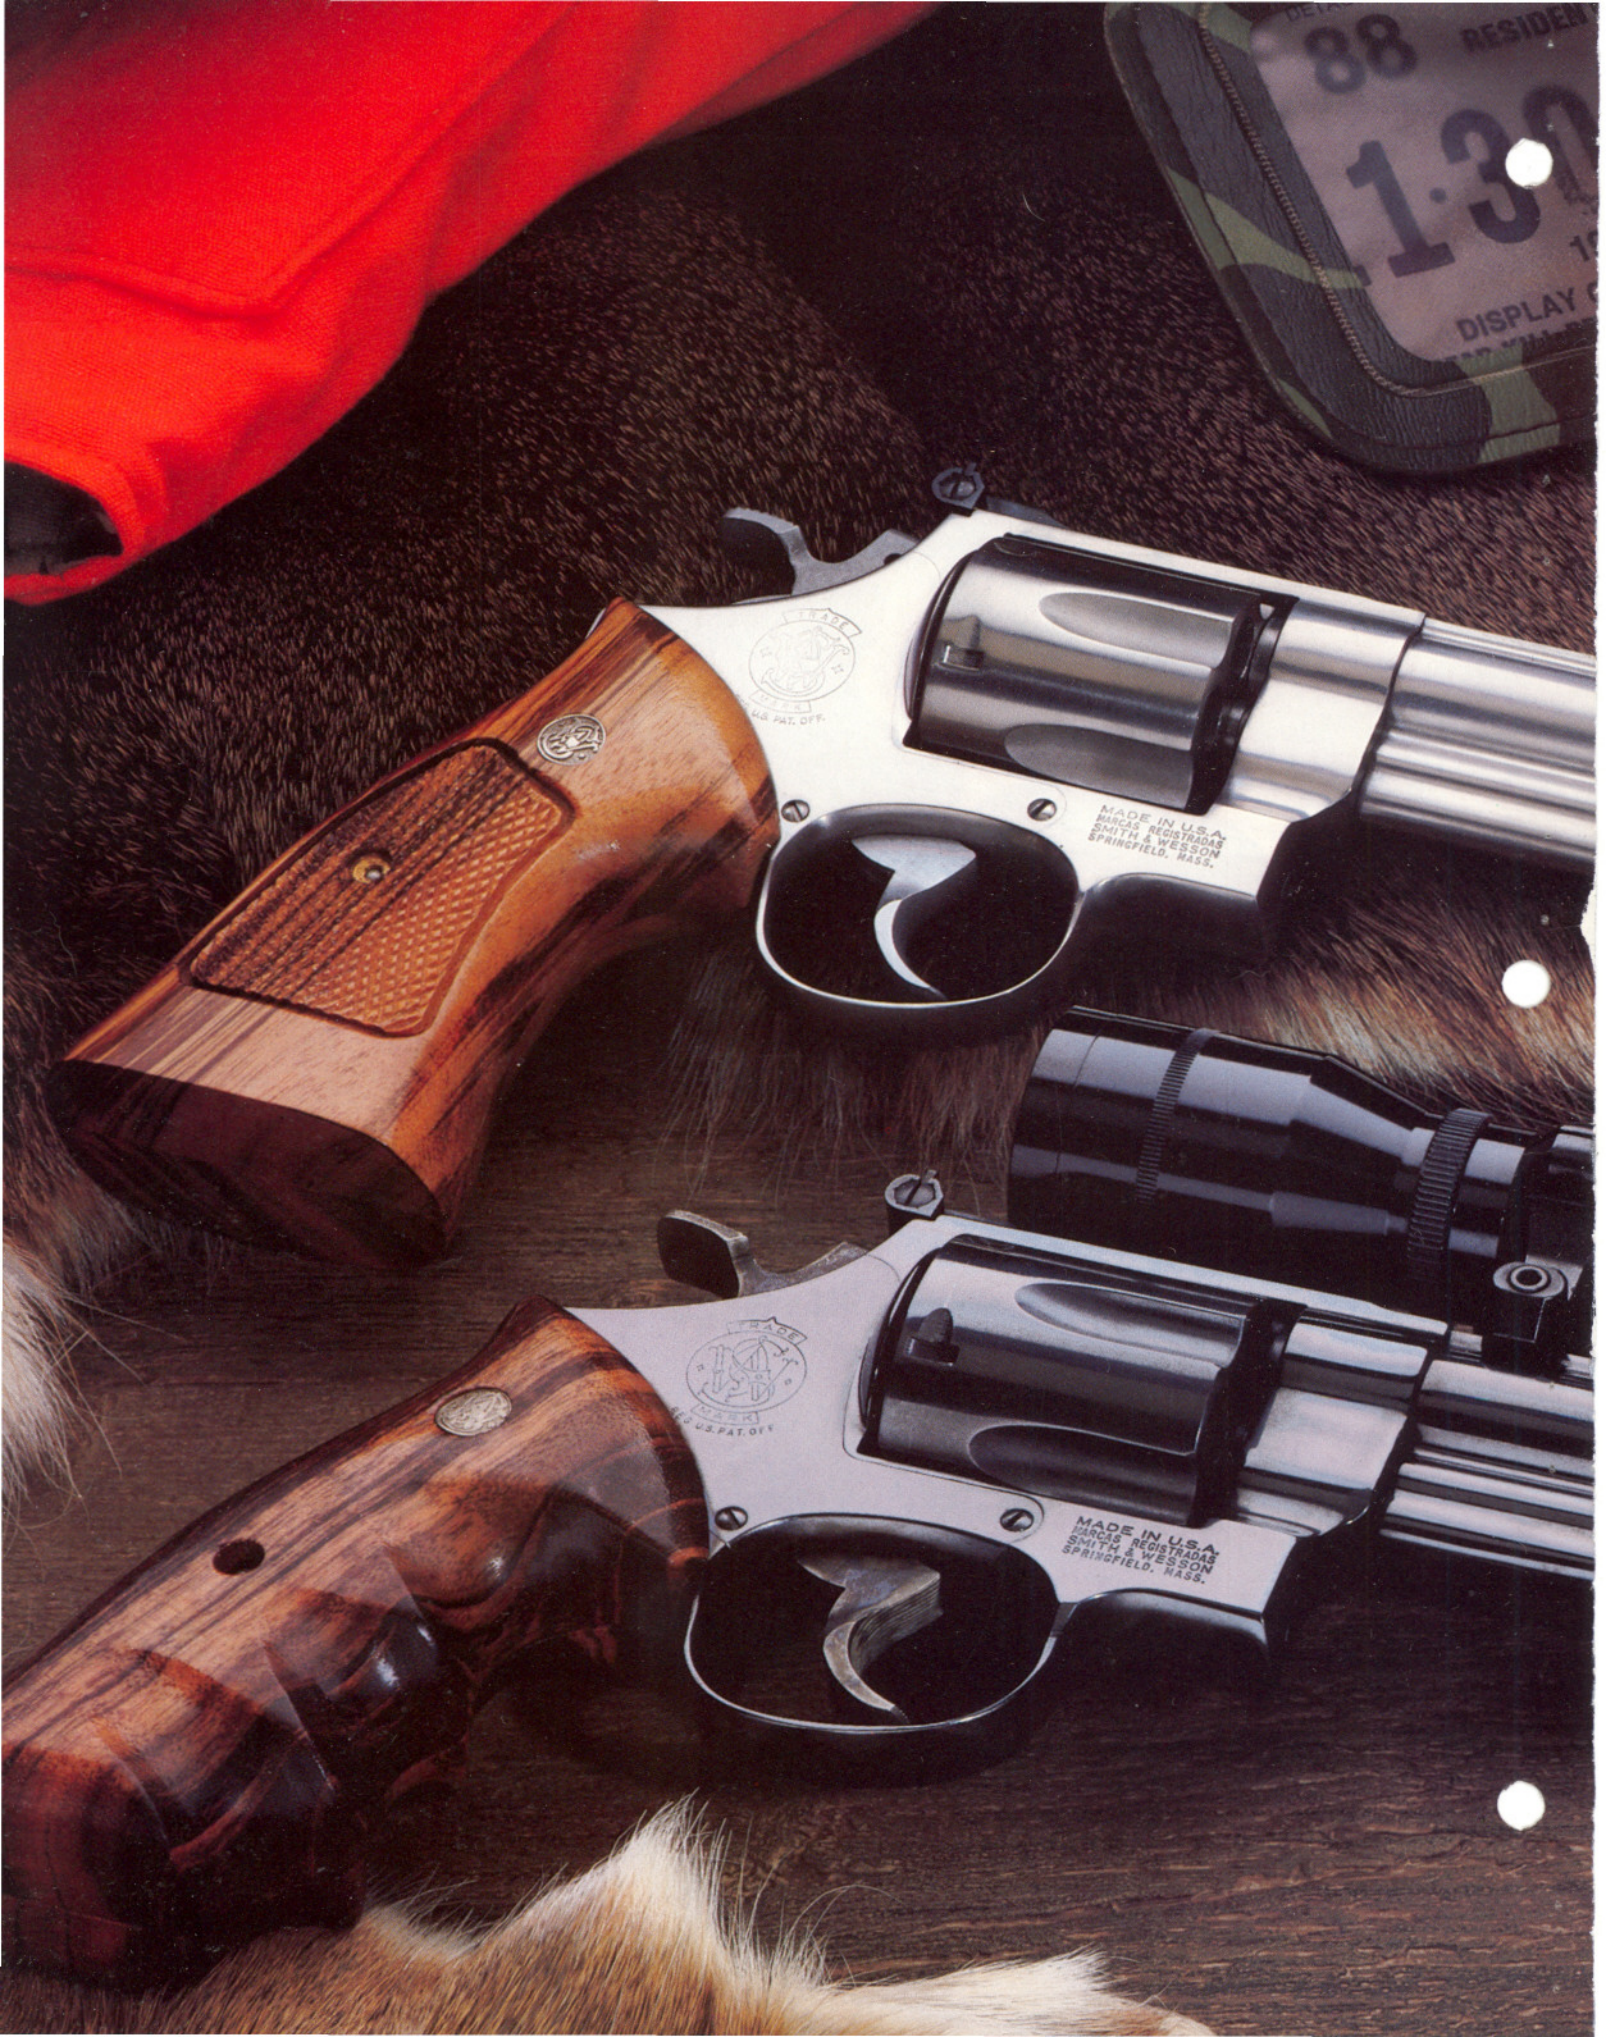

But the versatility doesn't stop with a wide range of uses. You also have a wide enough range of options to virtually customize your .357 straight from the factory, starting with a choice of blue (Model 586) or stainless steel (Model 686). You can select from four barrel lengths, five sight systems, and target or combat stocks.

That versatility—and the confidence that comes with owning a sturdy, reliable revolver—make the 586 and 686 the first choice of law enforcement, handgun hunters, sport shooters and competitors. After all, we invented the MAGNUM nearly 50 years ago. And we build the best MAGNUMS today.

Shown, top to bottom: Model 686 and 586. For more information, refer to page 30 of the Product Selection Guide.

LARGE FRAME REVOLVERS

When it comes to handgun hunting, there's only one authority: Smith & Wesson. It's no exaggeration to say that our powerful large-frame revolvers, a proud dynasty that stretches back more than 50 years, invented the sport of hunting with handguns.

The undisputed leaders, of course, are the .44 MAGNUM Models 29 (blue) and 629 (stainless steel). And now that they're available with factory scope mounts as an option, their dominance in the field is assured.

The Smith & Wesson Scope Mount System is efficient, functional—and remarkably easy to install and remove. And when your scope is in place, it can be removed as a unit with both ring mounts, so there's no effective change on zeroing.

All the S&W .44 MAGNUMs, whether scope-mounted or not, are legendary for their accuracy, forged-in toughness, and lean, easy to carry design.

So are the .41 MAGNUM 57 and 657, your first choice if you prefer to hunt with a slightly smaller bore. Strong and field-worthy, these revolvers are noted for their ballistic efficiency and flat trajectory. So the good shots are easy to set up and make, even in rough terrain.

You have more choices, too—six models, 22 variations, four calibers. In fact, there's a large-frame S&W for whatever challenge you set yourself next season, bear or whitetail, boar or varmint. Because when it comes to handgun hunting, we speak with authority—and the last word is Smith & Wesson.

Shown, top to bottom: Model 657 and Model 29 Scope Mount. The Scope Mount System available on Model 29/629 w/8³/₈" barrel only. For more information, see page 31.

ENGRAVING

If you appreciate the look of fine engraving, you may find that it's more affordable than you thought. Our skilled artisans can turn either your new or currently owned Smith & Wesson into a work of art with delicate scrollwork covering all, two-thirds, or one-third of your gun. And hand engraved initials, monograms, emblems, or inscriptions can be incorporated into the pattern or engraved alone.

Gold-filled engraving of sideplates and barrels is also available to add a dramatic personal touch to your handgun.

To discover the possibilities, contact your dealer or the Smith & Wesson Engraving Department.

ACCESSORIES

Smith & Wesson offers an assortment of accessories as well as factory-installed options that will enable you to customize a Smith & Wesson to your specific needs. All handgun accessories and service parts are available on a worldwide basis through Smith & Wesson distributors or directly from the factory.

How to Order Parts

Parts orders should be forwarded directly to:

Smith & Wesson
Parts Department
2100 Roosevelt Avenue
Springfield, MA 01102-2208

Telephone orders will be accepted with a limit of ten (10) items per order. Call (413) 781-8300, extensions 213 or 214. Collect calls will not be accepted.

Shipping and Payment

Smith & Wesson will not ship parts C.O.D. We will accept MasterCard, VISA, personal checks, on personal orders. Purchase orders and bill to agency will be accepted on all department orders. Merchandise will be sent via U.P.S. within ten working days upon receipt of order.
